

Functional Dependencies & BCNF Review:

Customer:
customer_id determines name, email, phone
Category:
category_id determines category_name
Equipment:
equipment_id determines category_id, name, serial_number, daily_rate, status
serial_number also determines equipment_id, category_id, name, daily_rate, status
Rental:
rental_id determines customer_id, rental_date, expected_return_date, actual_return_date
RentalItem:
(rental_id, equipment_id) together determine rental_rate

Based on the identified functional dependencies, all five relations satisfy BCNF because each non-trivial dependency has a superkey as its determinant. Additional business rules may introduce dependencies requiring further review.
